

ASSURE THE LIFECYCLE OF YOUR 5G NETWORK

With RADCOM ACE: An automated, cloud-native, assurance solution that ensures the end-to-end service quality throughout all stages of the 5G network evolution

1

Pre-Launch Stage

Optimize end-to-end network performance

Evaluate new network equipment

Optimize vRAN/oRAN deployments

Pinpoint network degradations

Troubleshoot network performance

Monitor multi-cloud environments

Perform packet analysis and session-tracing

Rapidly resolve network issues

2

Launch Stage

Enhance the customer experience

Smartly monitor E2E service quality

Understand customer issues and reduce churn

Gain visibility into 5G onboarding

Analyze handset and device issues

Utilize a CI/CD pipeline to assure the 5G network

Leverage AI/ML to detect network anomalies

Use ML to gain insights into encrypted traffic

3

On-Going 5G Rollout

Assurance: the key to unlocking 5G potential

Smartly monitor eMBB services in real-time

Monetize latency-sensitive services

Assure SLAs of your virtual network slices

Use NWDAF for closed-loop automation

Proactively monitor IoT services

Ensure edge networks with micro-probes

Optimize mmWave deployments

Contact us to learn how RADCOM ACE, our cloud-native, top tier, monitoring solution supports operators in their transition to 5G. Delivering dynamic, on-demand service assurance and network troubleshooting to a superior 5G customer experience.
